

TRACK TROUGH

A system that can be designed specifically for site conditions, the Track Trough gives the flexibility of having a track lighting system, while enabling the end user to partially hide the track and fittings, leaving a cleaner, uncluttered ceiling.

The Trough system can be designed to various widths and depths, to take into account sizes of spotlight and track conditions. It can be mounted continuously to create longer runs, where required, with link lead connections to feed on the mains supply – simplifying and speeding up installation time on site.

For a continuous system please provide a dimensioned layout drawing and we will provide a full product specification.

- Standard ITAB Prolight LED warranty (see page 161).
